Senior full stack engineer with over 8 years of professional experience. Contributed to many open-source projects, including over 10 personal packages with a combined downloaded total over 68k. Seeking an opportunity to utilize creative and technical talents with a contagious positive team-first attitude to help contribute towards the company's growth and overall performance.

Work Experience

Miva, Inc. – Lead Web Developer

08/2015 - Current

San Diego, CA

- Full stack engineer responsible for end-to-end web site and web application development. Led and managed 4 developers, including daily stand-up meetings.
- Specialized in data migrations from ecommerce platforms including Shopify, BigCommerce, and Magento, as well as API integration projects for top enterprise clients using a self-customized version of the PHP Laravel framework.
- Integral part of conceptualizing, planning, and developing a custom web framework for the professional services department, reducing site build project time and cost by an average of over 35%. The framework incorporates modern technologies like Node.js, Web Components, Sass, and Webpack.
- Collaborated with VP of Product, SVP of Customer Experience, and sales department to improve upon existing product features, as well as help prototype an average of over 5 new product features per year.
- Boosted web vitals and accessibility scores through Lighthouse and Axe tools by over 60% for top enterprise client sites.
- Helped drive and implement many continuous improvement initiatives for the entire professional services department to promote and define department standards, such as developer coding standards and project estimation process, resulting in improved quality of work and satisfaction delivered to clients.

ProBoards Inc. – Web Developer

08/2014 – 07/2015

Lake Forest, CA

- Implemented new features requested by management and end users.
- Improved maintainability of codebase and assured customer satisfaction by fixing reported bugs. Many times this would involve extensive planning, as well as a deep level of critical thinking.
- Implemented an embedded post and link sharing system that required working with APIs for several popular social media outlets such as: Facebook, Twitter, Instagram, LinkedIn, and Pinterest.
- Worked closely with COO and senior developer to learn advanced project management skills in a fast paced and dynamic environment.
- Demonstrated effective and efficient use of time management and project completion by fulfilling weekly sprint activities and objectives.

French Valley Barbell Club – Web Developer

01/2014 – 08/2014

Murrieta, CA

- Designed and developed website using HTML, CSS, vanilla JavaScript, and PHP.
- Responsible for determining all necessary coding requirements and implementation of features including blog and full-scale user authentication/profile system.
- Architected development concepts, project flow, and project scope.
- Ensured projects were delivered within timeline and budget.
